

Mucosal Integrity Testing

A New Diagnostic Modality

GERD and EoE

Disclosures and Conflicts

- Advisory (Pharma/Device):
 - Ironwood, Phathom, ISOThrive, Sanofi, Bayer
 - Medtronic, Diversatek healthcare
- Patent:
 - Mucosal Integrity Testing (Diversatek)
- Legal:
 - Consultation in litigation relating to acid suppressive agent

PPI Trial

PPI' s - q day

H2RA' s - BID

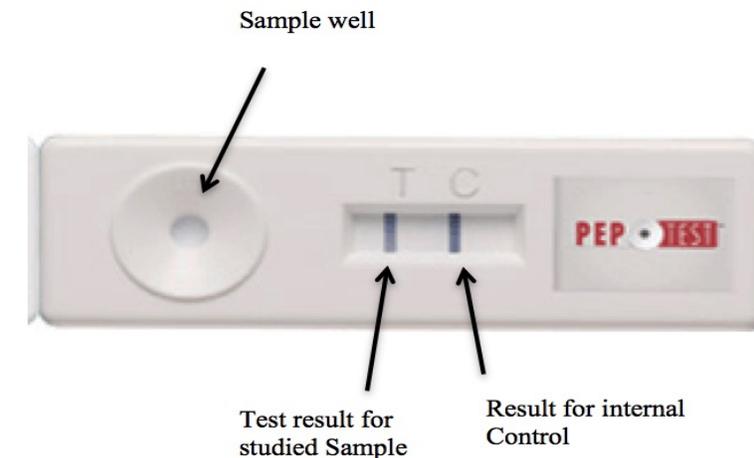

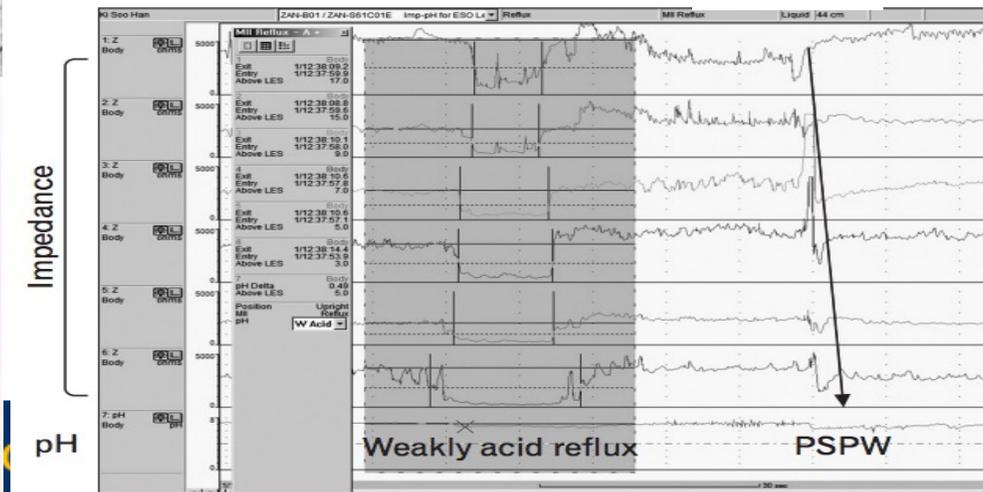

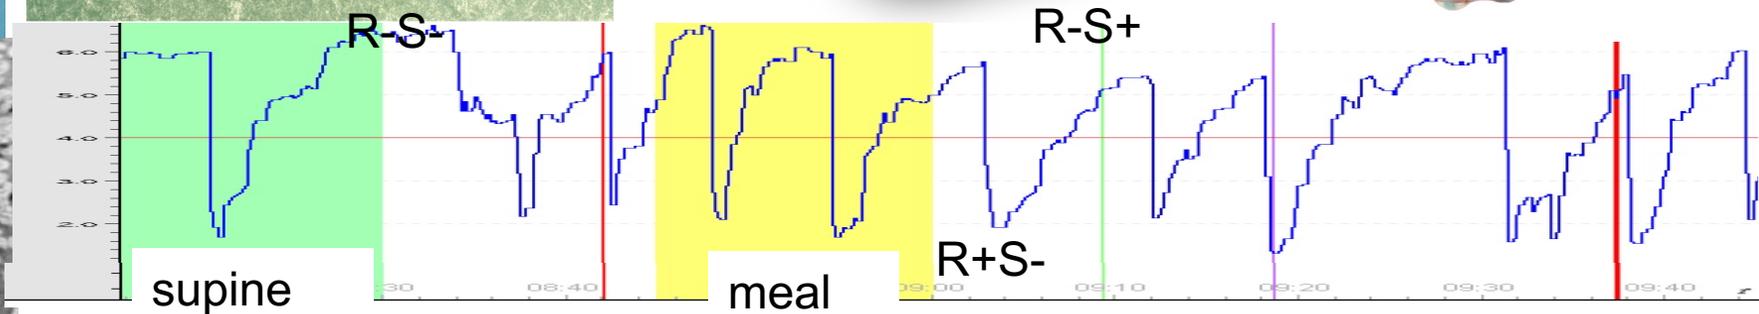

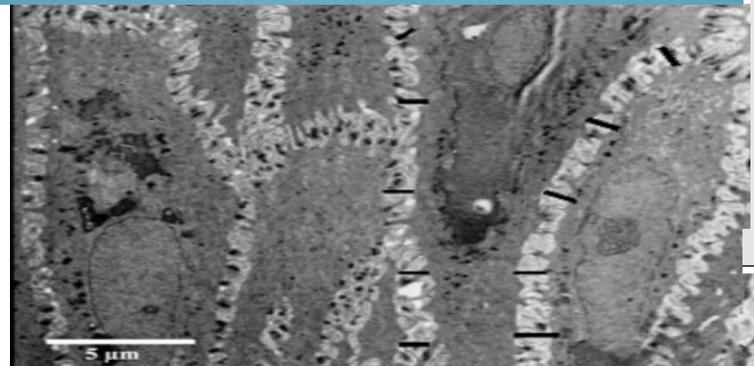

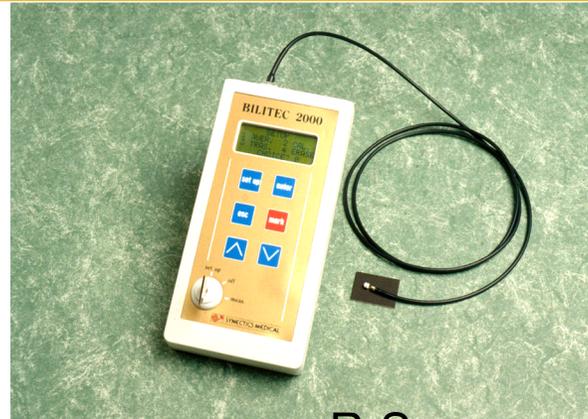

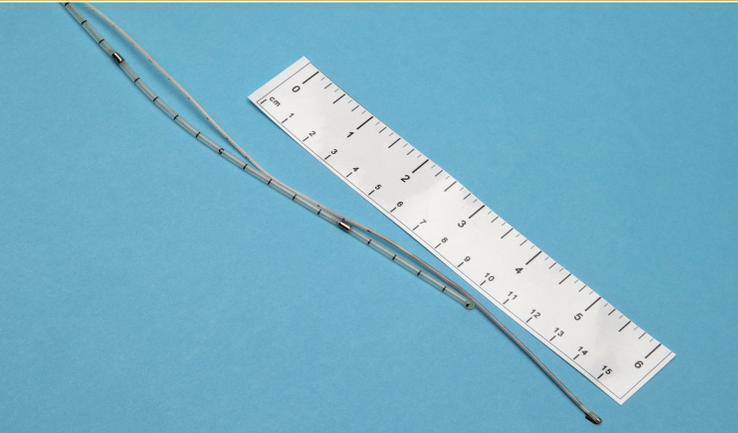

**H2RA' s-q day
Antacids
Life Style Modification**

INDICATIONS FOR TESTING

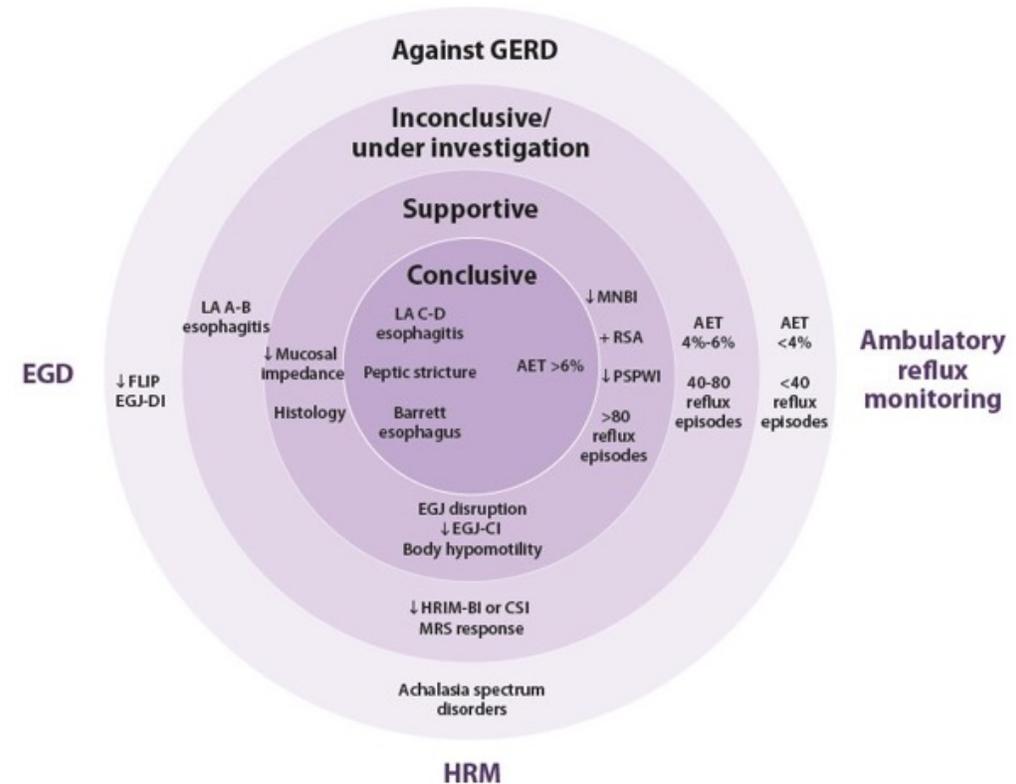

- Incomplete / lack of response to therapy.
- Prior to anti-reflux intervention.

COME AND GET IT!

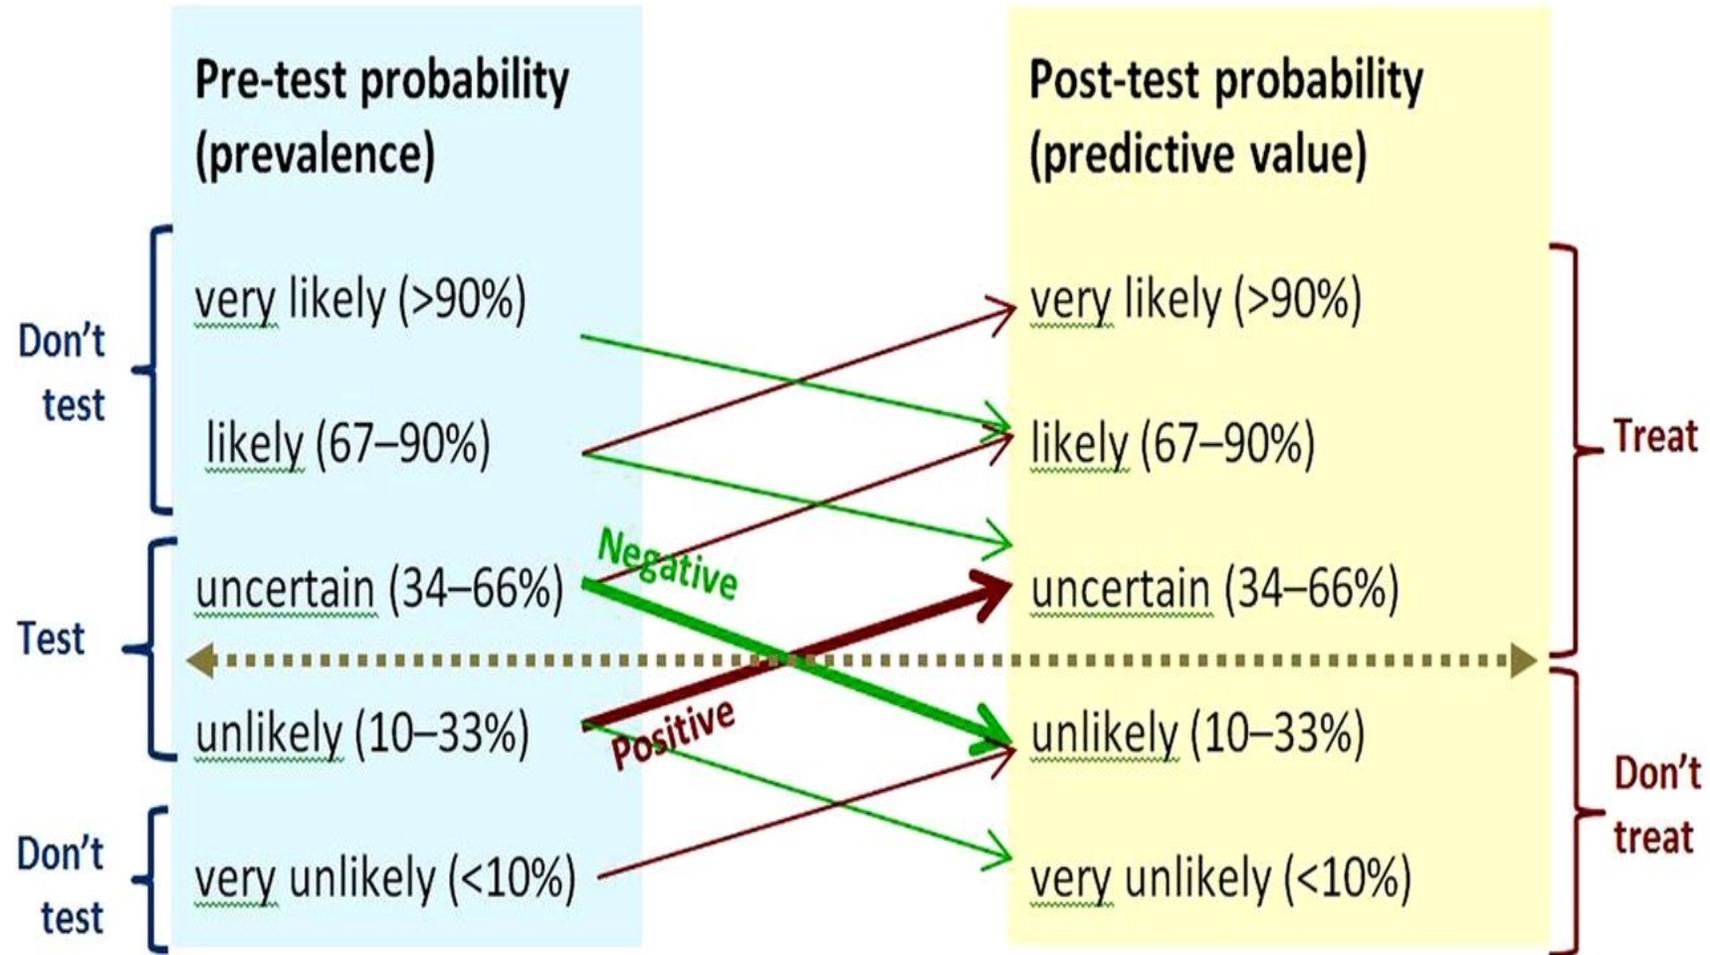

Test, Test, Test Again

- Shifting “cut-offs” of abnormalities
 - AET of >4.2%?
 - AET of >5.5%?
 - AET of >6%?
 - # of days with AET
 - AET >4.2% + MNBI?
 - MBNI+ PSPW?
 - Reflux episodes?

Cutoffs are Problematic?

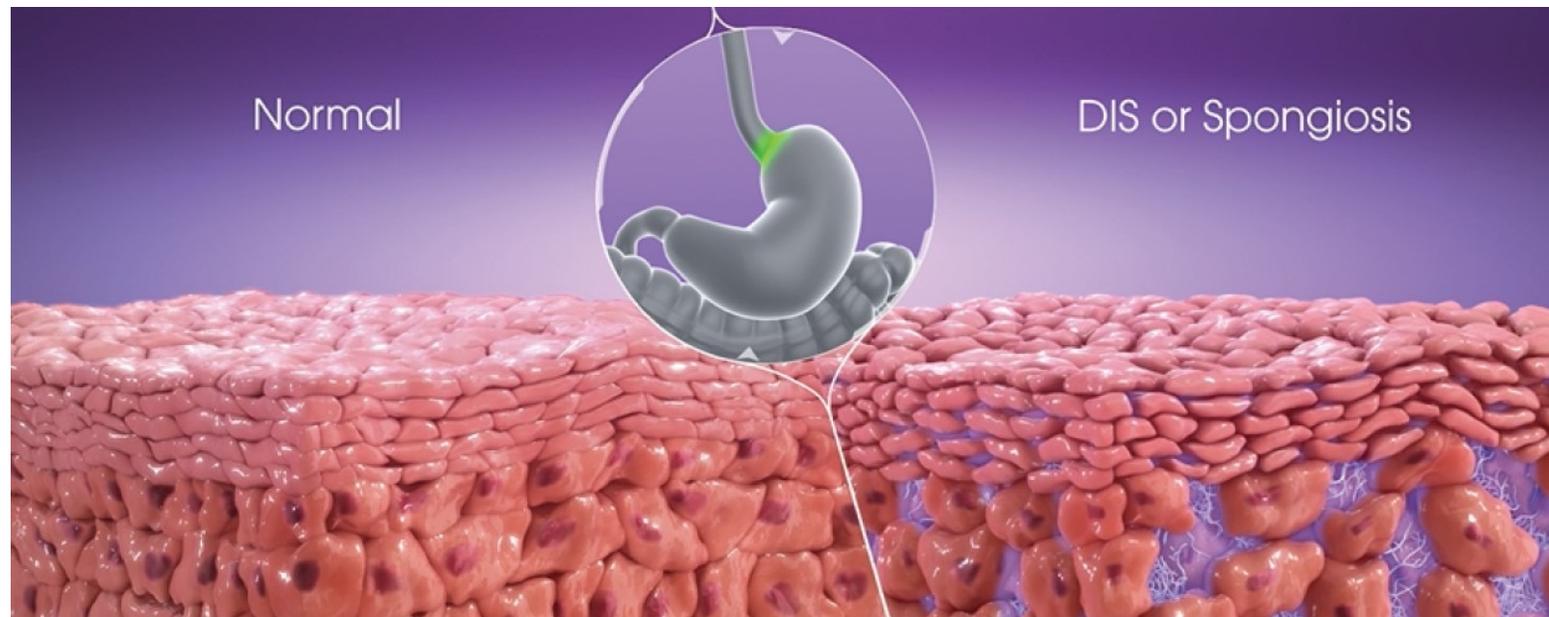

MIT

- Instant diagnosis
- Comfortable (patient perspective)
- Can monitor treatment response
- Detect damage to lining of esophagus rather than “capturing” reflux event

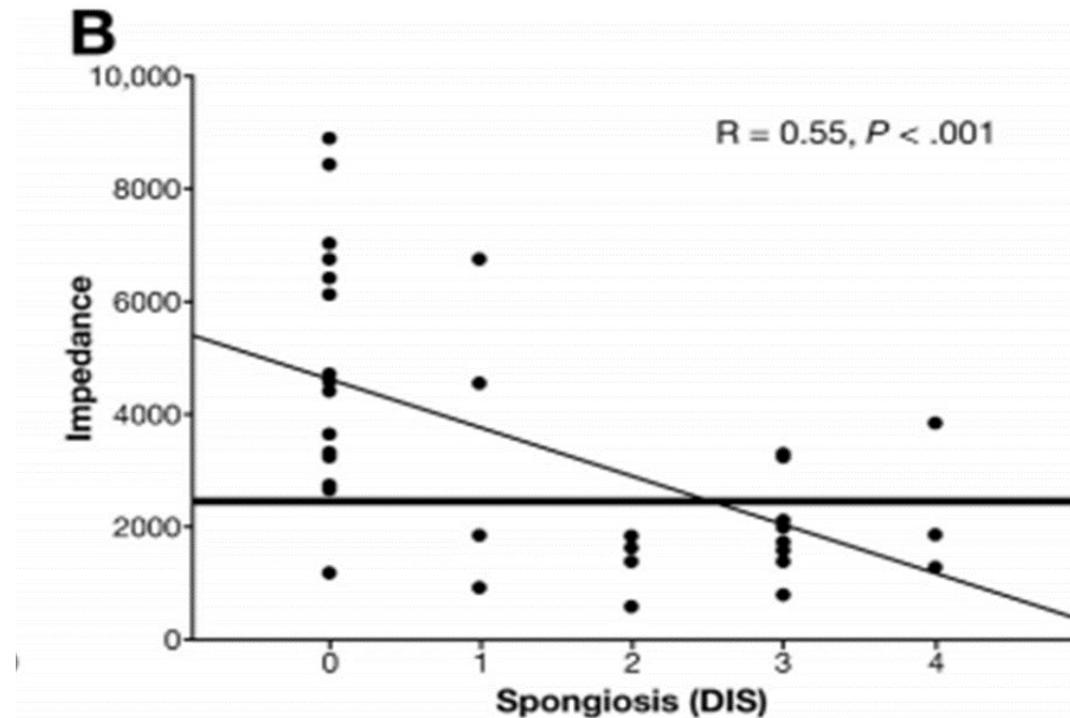

Mucosal integrity testing

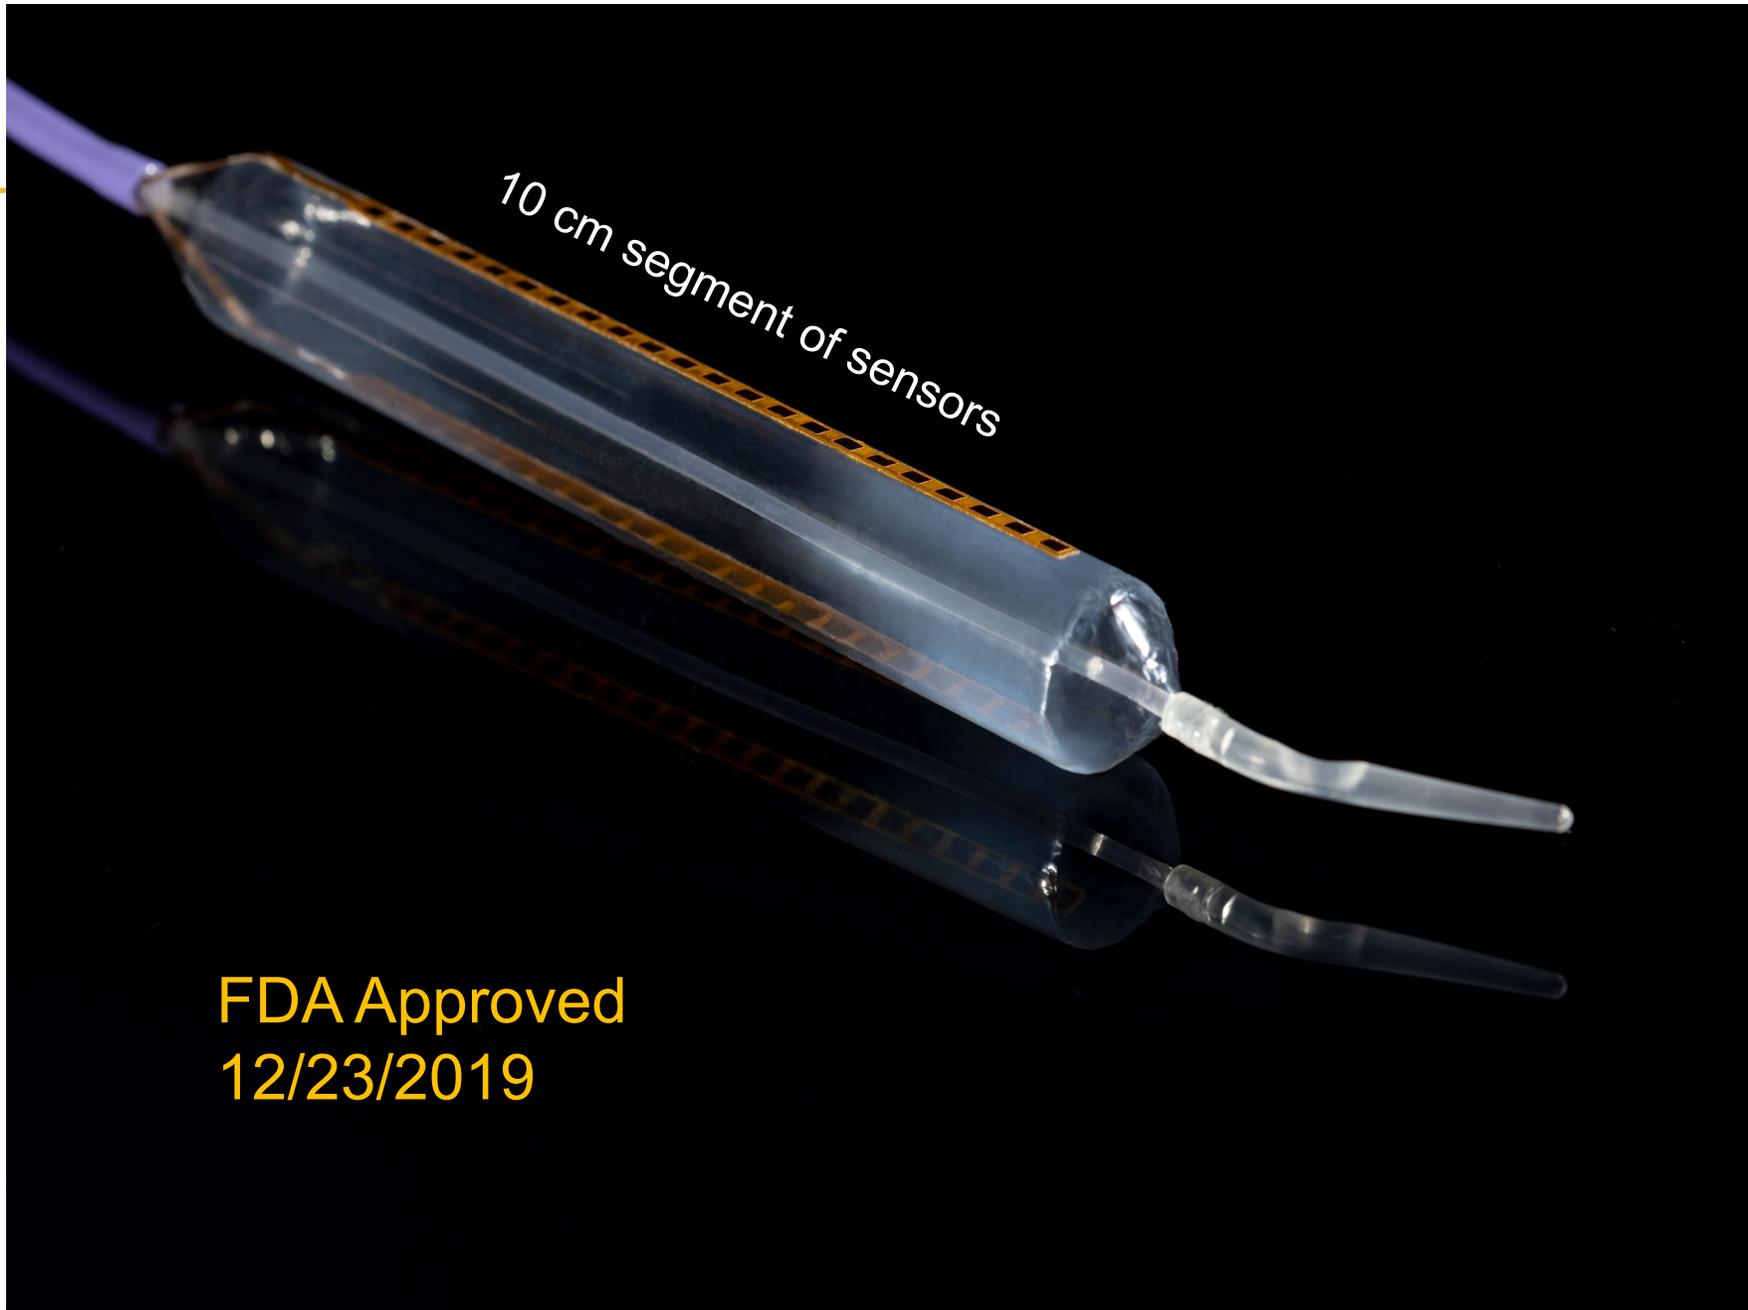

- Mucosal Integrity is affected by the presence of dilated intercellular spaces (DIS) which affects paracellular permeability.

MIT vs Spongiosis

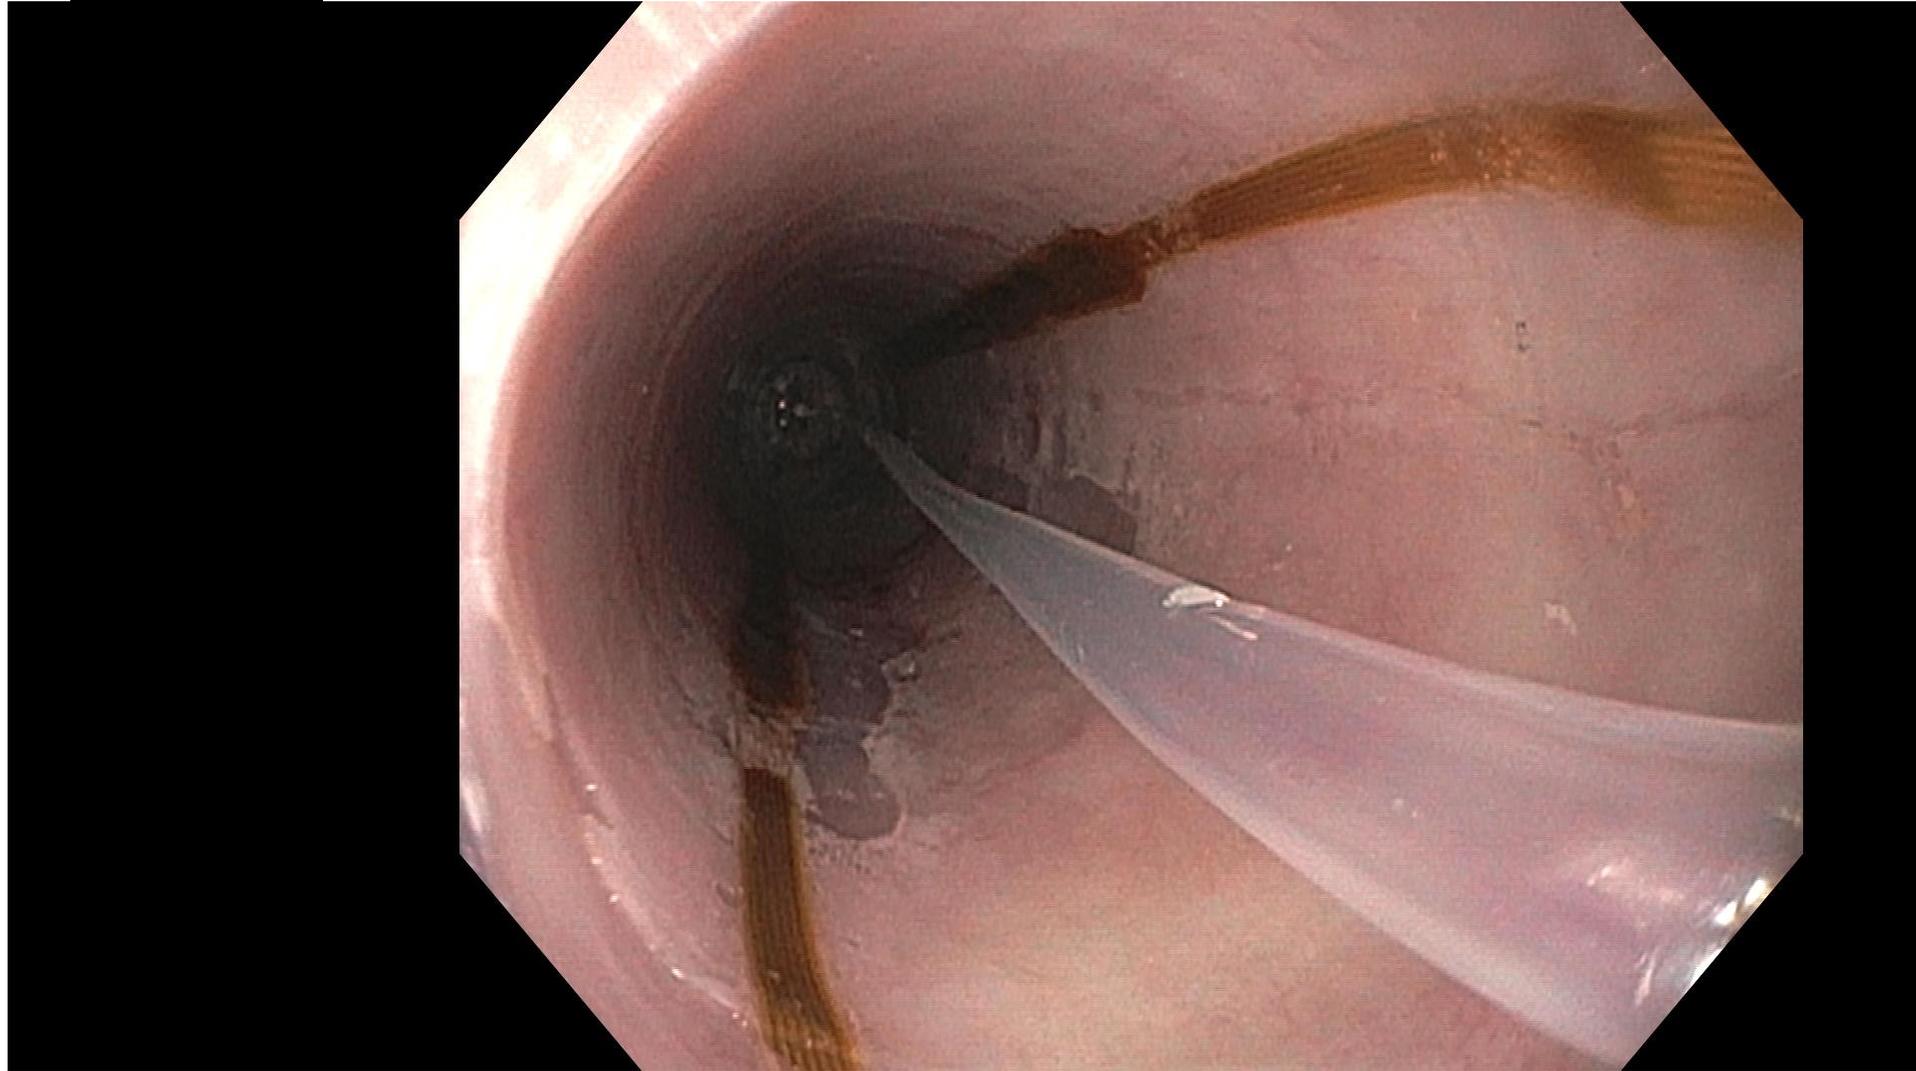

- Degree of spongiosis inversely correlates with MI measurements

Diagnosis: Normal Diagnosis, but several below 1k ohm measurements distal. Chance of some GERD?

Two different metrics of GERD

pH Testing

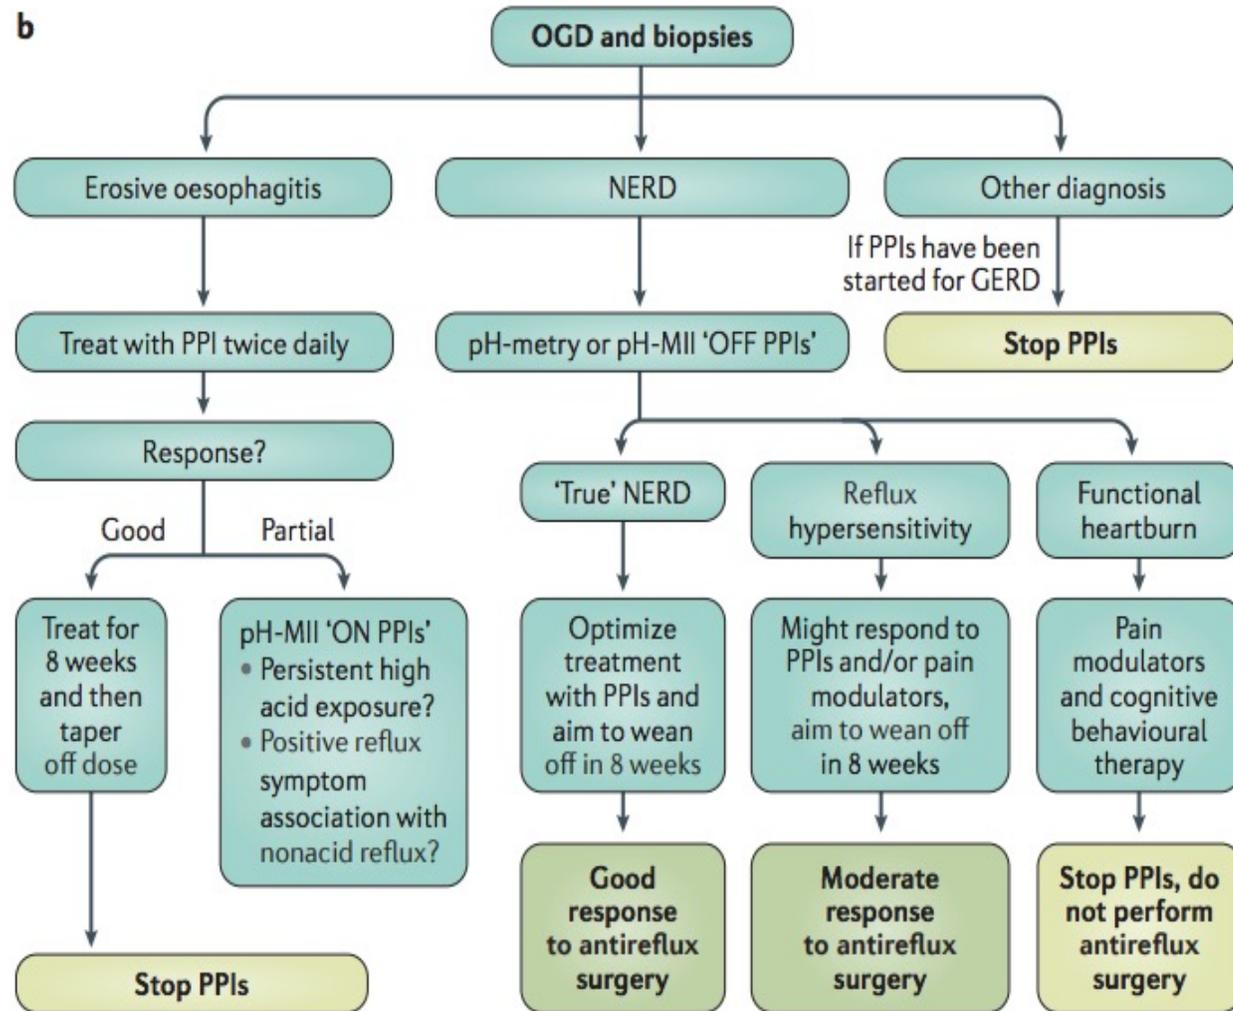

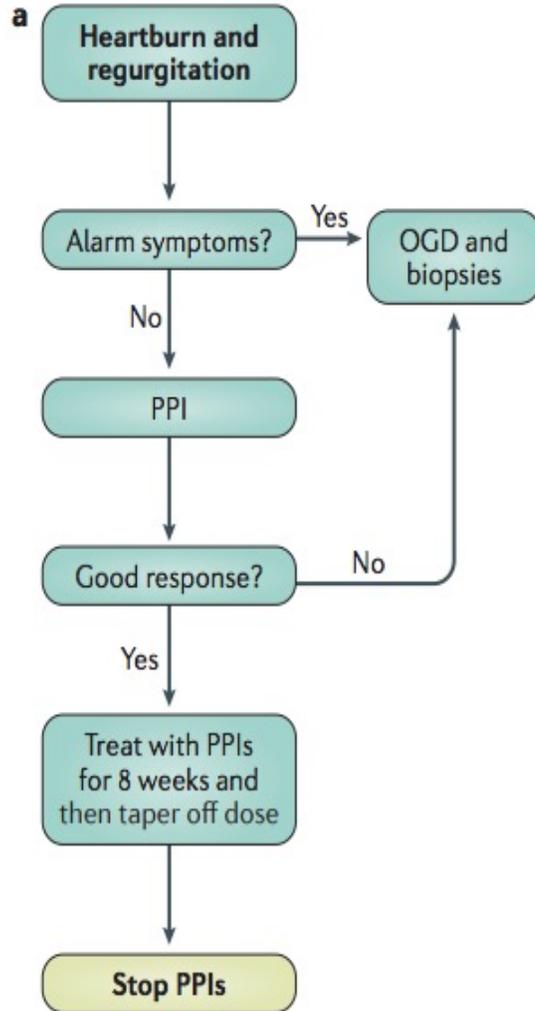

- Captures episodes of refluxate at a point in the esophagus (5 or 6 cm above GEJ)
- Susceptible to day-to-day variability of reflux patterns
- Susceptible to patient behavior

Mucosal Integrity Testing

- Captures “end-result” of reflux on the esophageal mucosa
- Can detect changes on 10 cm area of the esophagus
